The Oxygen Revolution is Here

ABS OXYGEN ABSORBER

WHAT IS IT?

ABS Oxygen Absorbers are oxygen scavengers that remove oxygen from the product packing and keep the product fresher for longer.

HOW IT WORKS?

ABS Oxygen absorber is made with a unique formulation and packed in special packing material which enhances the permeability of Oxygen. When placed properly in a hermetically sealed package, ABS Oxygen absorbers significantly reduce Oxygen to 0.01 %

HOW IT AFFECTS?

Oxygen is the primary pathway to food degradation that affects flavor, color, smell, texture and deteriorates nutrition. Aerobic microorganisms such as bacteria, mold, and fungi require oxygen to form thrive and multiply which ultimately spoils food. ABS Oxygen absorbers have a high capacity for oxygen absorption. ABS Oxygen Absorbers can reach and maintain an oxygen level of less than 0.01% within 24 to 48 hrs after placing them in a sealed pack.

PACK DETAILS?

Available from 30cc to 2000cc
